## About Project

MobiMate helps mobility-impaired individuals to find the trendiest accessible places according to user's exclusive needs, a smart travel guide who lets user personalize their itinerary and travel worry-free to elusive destinations. All brilliantly brought together in an app of uncompromising ease, comfort & utility. This is the beginning of a journey on wheels to a world with no limits.

# Layout & Typography

Lato's well-designed letterforms and balanced spacing enhance readability. Lato is known for its modern and elegant design, making it a suitable choice for our travel app that aims to convey a contemporary and sophisticated image. I liked that Lato offers a variety of weights and styles, allowing flexibility in creating hierarchy within the app's interface.

# Color Palette

Green is known for its calming and soothing effect on the mind, creating a sense of relaxation. On the other hand, I believe that green symbolizes a spirit of adventure, suggesting users that the app is a gateway to exciting and enriching travel experiences.

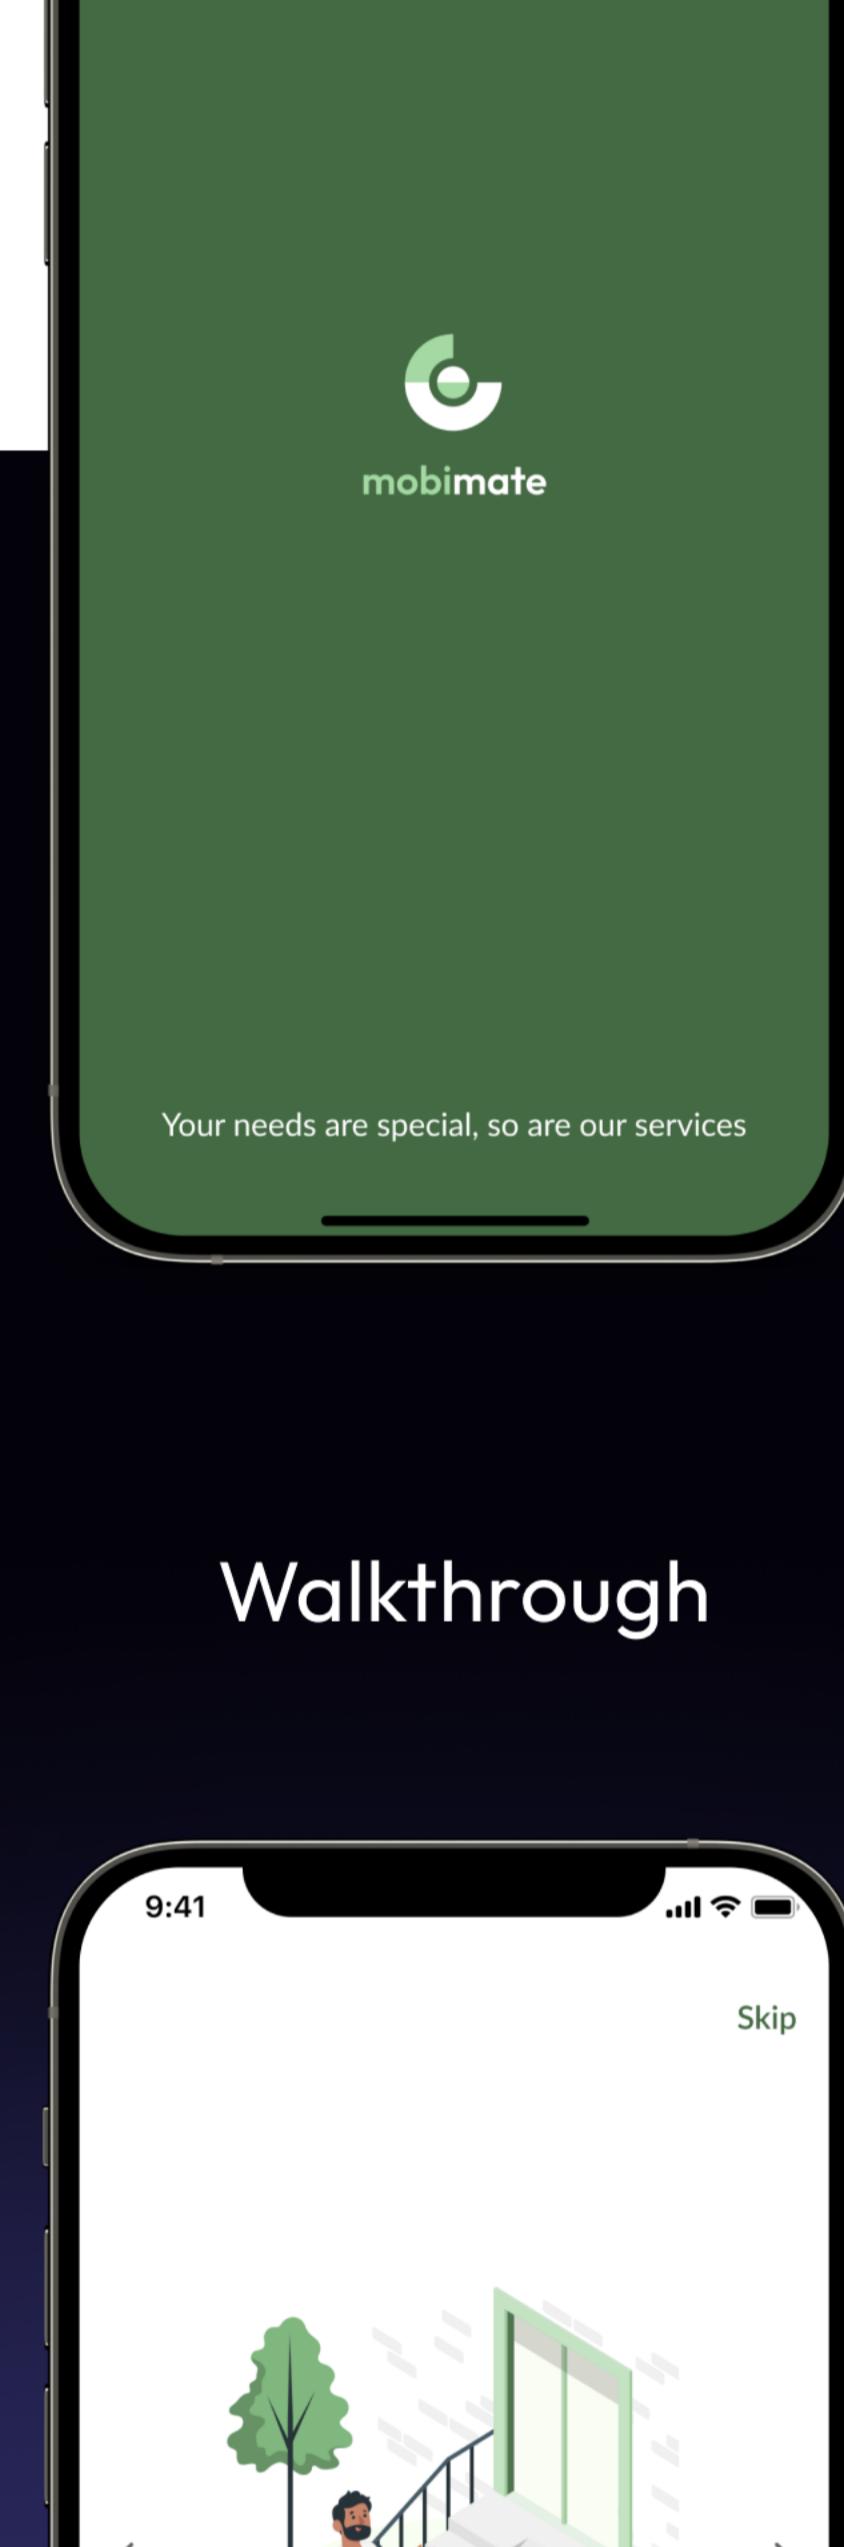

# Illustration Style

Illustrations have the power to capture attention, guide users through the app's features, and enhance the overall navigational experience. Including a diverse range of characters and scenes contributes to a sense of inclusivity, suggesting that the app caters to users with diverse backgrounds and interests. Moreover, its consistent use throughout the interface reinforces brand identity, fostering a sense of trust and familiarity among users.
